PERSONAL PROJECTS

Blog Application
- React Used in Frontend and in Backend (Node js+Express js) For Database Mongodb.
- React Hooks and Context API used to deal with data.
- Fetching Data from the database by Using Axios library.
- For password encryption inside Mongodb used Salt.
- authentication and authorization implemented.

Todo App ⧉
- React Hooks Used For passing props between one component to another components.
- By using this App We Add task , delete task and edit task.
- localstorages uses so that if user refresh the page data don't get ommited.
